MSX Use this computer only with peripherals and software having the **MSX** mark.

WARNING

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.

NOTICE FOR THE CUSTOMERS IN THE UNITED KINGDOM

IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

Blue: Neutral
Brown: Live

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:

The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.

The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

FEATURES

Built-in MSX-BASIC Program

The built-in MSX-BASIC program has various commands, statements and functions which allow for easy program development. With the MSX-BASIC sprite function, you can make and move the different patterns on each of the 32 sprite planes. The sound generator makes it possible to generate music or a wide range of sound effects by using PLAY and SOUND statement of the MSX-BASIC.

Two supplied MSX-BASIC manuals tell you not only how to use MSX-BASIC but also discuss the pleasures of programming.

Possibility of connecting two types of TVs

The HB-10P/HB10B has an RF connector and a 6-pin DIN-type VIDEO/AUDIO connector for video/audio output.

Various peripherals for the HB-10P/HB-10B

Various peripherals can be connected: the MSX-BASIC program and data can be saved on an audio cassette tape or a micro floppydisk. A color plotter printer can be used to print out data or graphics. You can use up to two joystick controllers to play a computer game.

Peripheral devices for HB-10P/HB-10B

Device name	Major features
HBD-50 Micro Floppydisk Drive	<ul style="list-style-type: none">● High-density information storage● Easy-to-operate● Fast recall of data
JS-55 Joystick	<ul style="list-style-type: none">● Designed for left- or right handed players● Shoot buttons on both left and right
JS-75 Wireless Joystick	<ul style="list-style-type: none">● No cords to get tangled● Can be operated from up to 7 meters away
SDC-500 Bitrecorder	<ul style="list-style-type: none">● Easy to operate with any computer● High-speed data transfer
PRN-C41 Color Plotter Printer	<ul style="list-style-type: none">● Four-color printer: black, blue, green and red● Light weight and compact● Can use any paper up to 114 mm in width

- Your dealer may not handle some of the above listed optional accessories. Please ask the dealer for detailed information about the optional accessories available in your country.

PRECAUTIONS

On safety

- Operate on 220 or 240 V AC by using the supplied AC power adaptor according to your local power supply. Do not use any other AC power adaptor.
- The unit is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet, even if the unit itself has been turned off.
- Should any solid object or liquid fall into the cabinet, turn the power off and have the unit checked by qualified personnel before operating it any further.
- Do not place or drop heavy objects on the power cord. Use of a damaged cord is dangerous. To disconnect the cord, pull it out by the plug—never pull the cord itself.

On installation

- The computer consists of high-precision electronic parts. Do not drop it or bump it against other objects. Do not place it in a place subject to vibration or on an unstable base.
- Do not install the unit near heat sources such as a radiator or an air duct, or in a place subject to direct sunlight, excessive dust, and/or moisture.
- Do not place electronic equipment near the computer. It may malfunction if affected by an electromagnetic field.
- Provide adequate air circulation to prevent internal heat build-up. Do not place the unit on surfaces (rugs, blankets) or near materials (curtains, draperies) that may block the ventilation slots.
- Use only the specified peripheral equipment; otherwise, trouble may result. Before connecting peripheral equipment, be sure to turn the power off or the internal IC chip may be damaged.

On cleaning

- Clean the cabinet and keyboard with a soft, dry cloth, or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of solvent, such as alcohol or benzine, which might damage the finish.

If trouble occurs, unplug the unit, and contact your designated Sony dealer.

LOCATION AND FUNCTION OF PARTS AND CONTROLS

There are several accessories supplied with HB-10P/HB-10B.

■ **AC power adaptor AC-HB1P/AC-HB1B**

Used to connect the computer to a wall outlet (mains outlet).

■ **RF cable**

Used to connect the computer to an ordinary TV set.

■ **Antenna selector**

Switch to ANTENNA to watch TV and to COMPUTER to use the computer.

CONNECTION OF PERIPHERALS

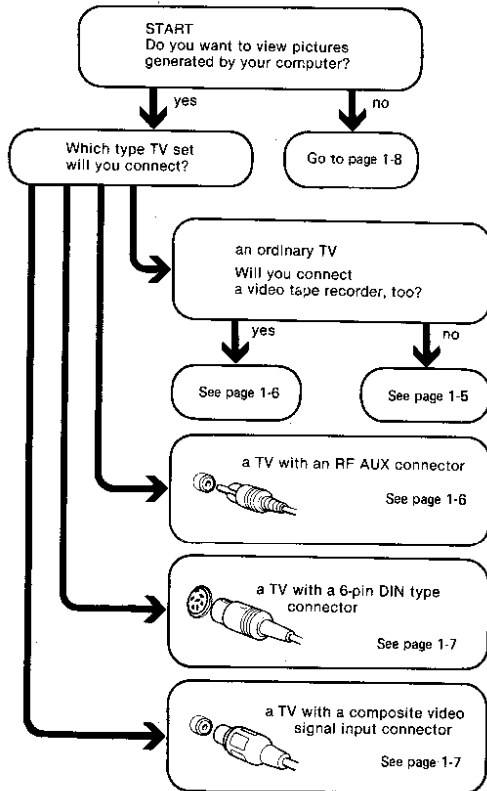

Before making connections, make sure to turn off the computer and all the devices to be connected.

CONNECTING A TELEVISION SET

To view pictures generated by the computer, connect the computer to a TV set. There are some kinds of TV sets and they are connected differently.

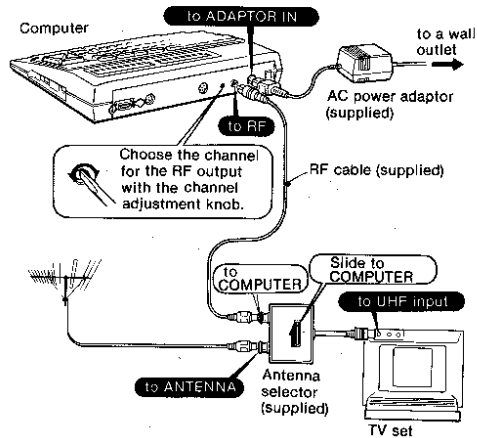

Make sure which type your TV set is.

- **A TV set with an RF AUX connector**
Has an RF AUX connector and an RF AUX button in front. Connect the RF AUX connector to the computer.
- **A TV set with composite video-signal input connector**
Has an audio-input jack and a video-input jack. Connect the VIDEO/AUDIO connector of the computer to these jacks with an optional cable.
- **A TV set with a 6-pin DIN type composite video signal input connector**
Has a 6-pin DIN type connector for composite video signal input. Connect the VIDEO/AUDIO connector of the computer to this connector with an optional cable.
- **An ordinary TV set**
Does not have any of the above connectors. Connect the computer to the antenna terminal on the rear of the TV set.

Connecting an ordinary TV set with no video tape recorder

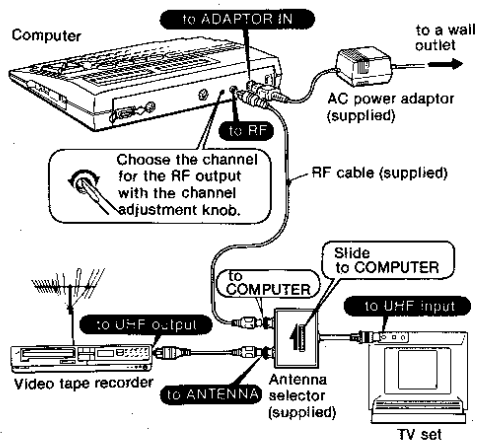

If the TV is connected to an antenna, first disconnect the antenna cable.

The RF output of the computer is set to UHF channel 36 at the factory. If this channel is occupied, or if the picture of this channel is distorted, reset the RF output to another channel with a small screwdriver. Turn the knob clockwise for channel 35 and counterclockwise for channel 37.

After the connections have been made, see page 1-8.

Connecting an ordinary TV set with a video tape recorder

The RF output of the computer is set to UHF channel 36 at the factory. If this channel is occupied, or if the picture of this channel is distorted, reset the RF output to another channel with a small screwdriver. Turn the knob clockwise for channel 35 and counterclockwise for channel 37.

After the connections have been made, see page 1-8.

Connecting a TV set with an RF AUX connector

The RF output of the computer is set to UHF channel 36 at the factory. If this channel is occupied, or if the picture of this channel is distorted, reset the RF output to another channel with a small screwdriver. Turn the knob clockwise for channel 35 and counterclockwise for channel 37.

After the connections have been made, see page 1-8.

Connecting a TV set with a 6-pin DIN type composite video signal input connector

After the connections have been made, see page 1-8.

Connecting a TV set with a composite video signal input connector

If the TV set has a BNC-type composite video signal input, an RK-140 connecting cable (optional) can be used instead of the VMC-262M.

After the connections have been made, see page 1-8.

CONNECTING A JOYSTICK CONTROLLER

CONNECTING A TAPE RECORDER FOR USE AS AN EXTERNAL MEMORY

You can save programs and data by using a data corder or a cassette tape recorder.

CONNECTING A FLOPPYDISK DRIVE UNIT

Use a floppydisk drive displaying an MSX mark such as the Sony HBD-50 micro floppydisk drive.

CONNECTING A PRINTER

Use a printer displaying an MSX mark such as the Sony PRN-C41 plotter printer.

PREPARATIONS

Connect the computer to a wall outlet using the AC power adaptor (supplied).

Before turning on the operation switch, check the following.

- Have all the necessary connections been made? You can find how to connect peripherals on pages 9 to 19.
- Have all devices been connected to the wall outlet?
- If the TV is connected to the RF connector of a computer, select UHF channel 35, 36 or 37 for the computer output. The channel must be the same as the channel the computer's channel adjustment knob has been set to. If the TV has a RF AUX button, depress the RF AUX button.

Set the switch of the antenna selector to the COMPUTER position when using the computer. To watch TV, set the switch to the ANTENNA position.

HOW TO START

There are two kinds of programs and the way to start them are different.

MSX-BASIC interpreter: You can make your own BASIC programs and programs in cassette tape form can be loaded.

Commercially available programs in MSX-cartridge form: Games and other useful programs are available.

Make sure which program you will start.

HOW TO ACTIVATE THE MSX-BASIC

- 1 Remove any program cartridges from the cartridge slots.
- 2 Turn on the TV set's and the computer's switch. The following display appears,

then it changes to the MSX-BASIC mode and the MSX-BASIC becomes ready.

HOW TO START A GAME OR OTHER PROGRAMS IN AN MSX-CARTRIDGE

- 1 Insert the cartridge into cartridge slot 1 or 2.
- 2 Turn on the TV and the computer.
- 3 The program in the cartridge will start.
For further information about the program, refer to the instruction manual that came with the cartridge.

Notes: When you turn off the computer's power, wait at least four seconds before turning it on again.

Do not insert or remove a cartridge while the computer's power is on.

KEYBOARD

KEY ARRANGEMENT

Alphanumeric characters are arranged as on a standard typewriter keyboard, as shown below.

The keyboard has character input, control, edit and function keys. When a character input key is pressed, the corresponding character is entered into the computer. When a control key is pressed, the corresponding operation is performed.

A graphic pattern sheet is supplied on page 33. Use this sheet to see at a glance what keys to press to enter a desired symbol or a graphic pattern.

CHARACTER INPUT

To enter characters

When a character input key is pressed, the small letter or symbol printed on the lower part on the key top is entered.

Pressed key	Character or symbol to be entered
	t
	6

When a character input key is pressed with the key, the capital letter or symbol printed on the upper part of the key top is entered.

Pressed key	Character or symbol to be entered
+	S
+	+

To enter only capital letters

Depress the key. When this key is pressed, it will lock; when pressed again, it will unlock. While this key locks, the indicator on the key lights up, and the 26 alphabet letters are entered in caps (just as when the key is pressed in the normal mode), but numbers and symbols are entered in the normal mode.

Locked key	Pressed key	Character or symbol to be entered
		K
		7

To put an accent mark on a character

Key is used to put an accent mark on a character.

To put the accent mark printed on the lower-left of the key (´) on a character, first, press key (in this step, no symbol is displayed on the screen). Then, press the character input key needing an accent mark. The character with an accent mark is displayed.

In the same way, to put the accent mark on the upper-left of the key (ˆ), press the key while pressing the key. To put the accent mark on the lower-right of the key (˘), press the key together with the **[CODE]** key. To put the accent mark on the upper-right of the key (˙), press the key while pressing the key and the **[CODE]** key.

To enter a graphic character or symbol

The procedure to enter a character or symbol printed on the supplied graphic pattern sheet is as follows:

To enter graphic patterns

To enter the graphic pattern printed on the lower-right part of the key press the corresponding keyboard character input key while pressing the **[GRAPH]** key.

Pressed key	Graphic pattern to be entered
[GRAPH] +	
[GRAPH] +	

To enter the graphic pattern printed on the upper-right part of the key press the corresponding keyboard character input key while pressing the [GRAPH] key and the [F] key.

Pressed key	Graphic pattern to be entered
[GRAPH] + [F] + [F1]	♪
[GRAPH] + [F] + [F2]	÷

To enter special characters

To enter the character or symbol printed on the lower-left part of the key on the graphic pattern sheet, press the corresponding keyboard character input key while pressing the [CODE] key.

Pressed key	Character or symbol to be entered
[CODE] + [F3]	ó
[CODE] + [F4]	μ

To enter the character or symbol printed on the upper-left part of the key on the graphic pattern sheet, press the corresponding keyboard character input key while pressing the [CODE] key and the [F] key.

Pressed key	Character or symbol to be entered
[CODE] + [F] + [F1]	Σ
[CODE] + [F] + [F2]	N

Note

When using the [CODE] key, release the [F] key.

EDIT KEY FUNCTIONS

Keys HOME, INS, DEL, and cursor move keys (←, →, ↑, ↓) are mainly used for editing a line or screen. Each function is determined by the software used, so read the relevant Software Guide for details. Under MSX-BASIC, the edit keys function as follows:

HOME key

When this key is pressed, the cursor moves to the upper-left corner of the display screen. The characters displayed on the screen remain. When pressing this key together with the [F] key, the cursor moves to the upper-left corner of the screen, while any character displayed on the screen is erased.

INS (insert) key

Once this key is pressed, the computer is set to the insert mode. In this mode, the cursor becomes smaller and the character at the cursor position and the followings are moved one space to the right when a key is pressed, and you can insert as many characters as you want. When pressing this key again or moving the cursor with cursor move keys, the insert mode will be released.

DEL (delete) key

The character at the cursor position is deleted. All characters after the deleted character are moved one space to the left.

← (back space) key

When this key is pressed, the cursor moves one space to the left and the character in that position is deleted.

←, → (cursor move) keys

These keys are used to move the cursor one space in the direction of the triangle: to the right, to the left, up or down. Any character which the cursor moves over does not change.

CONTROL KEY FUNCTIONS

[SHIFT] key

When this key is pressed together with a character input key, the corresponding symbol in the shift position (upper-left symbol on the key) or corresponding capital letter is entered.

[LOCK] key

When this key is pressed, it will lock so that all letters are entered in capitals. Numbers and symbols will be entered normally even if this key locks. When the key is pressed again, it will unlock. While this key is locked, the indicator on the key lights up.

[CODE] key

When this key is pressed together with a character input key, the lower-left character or symbol printed on the graphic pattern sheet (supplied at the end of this manual) is entered.

When this key is pressed together with a character input key and the **[SHIFT]** key, the upper-left character or symbol on the graphic pattern sheet is entered.

[GRAPH] key

When this key is pressed together with a character input key, the lower-right graphic pattern printed on the key is entered.

When this key is pressed together with a character input key and the **[SHIFT]** key, the upper-right graphic pattern printed on the key is entered.

[CTRL] (control) key

When this key is pressed together with certain keys, a special operation is performed. The key function is determined by the software used.

[TAB] key

This key is used to move the cursor to the next tab position. In MSX-BASIC, tabs are set at every eight characters. Any characters which the cursor goes over are deleted when the cursor moves to the next tab position.

[ENTER] key

Press this key to indicate the end of a line of data or commands input from the keyboard. Press this key every time you finish entering a line.

[ESC] (escape) key

The function of this key is determined by the software used. Under MSX-BASIC, this key is inoperative.

[STOP] key

Press this key to interrupt program execution or listing. You can restart the program by pressing this key again.

Pressing this key together with the **[CTRL]** key does the same. In this case, however, you can restart program execution with the CONT command, but listing cannot be continued.

[SELECT] key

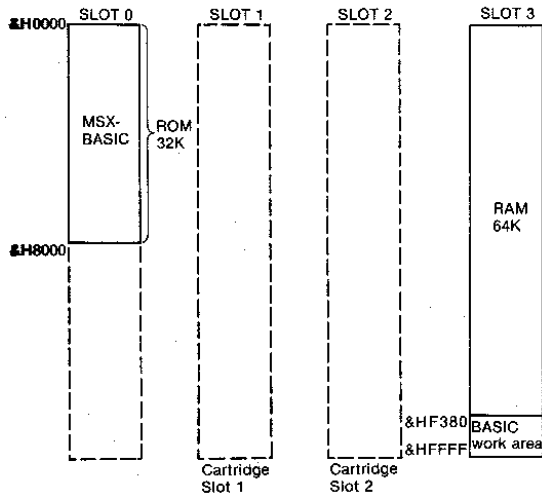

The function of this key is determined by the software used. Under MSX-BASIC, this key is not used.

FUNCTION KEYS

Keys **[F1]** to **[F5]** (**[F6]** to **[F10]**) are called function keys. The functions of these keys are determined by the software. Therefore, read the relevant software's manual for their functions.

MEMORY MAP

HB-10P/HB-10B

User's program by BASIC is written from the address &H8000.
 The capacity of the free area (RAM capacity excluding the system area) can be checked by the FRE function.

GRAPHIC PATTERN SHEET

SPECIFICATIONS

CPU	
Processor used	Z-80A
Clock frequency	3.579545 MHz
WAIT	1 WAIT at CPU M1 cycle
Interrupt	Maskable interrupt Z-80A mode 0 mode 1 mode 2
Resetting	Automatic at power on (Memory contents are not maintained.)

Storage temperature	-15°C to +60°C (5°F to 140°F)
Dimensions	Approx. 384×65.5×237 mm (w/h/d) (15 ¹ / ₈ ×2 ⁷ / ₈ ×9 ⁷ / ₈ inches) main unit only, including projecting parts and controls
Weight	Approx. 1.9 kg (4 lb 3 oz) main unit only
Accessories supplied	AC power adaptor (1) RF cable (1) Antenna selector (1) Operating Instructions (1) Introduction to MSX-BASIC (1) MSX-BASIC Programming Reference Manual (1)

While the information given is true at the time of printing, small production change in the course of our company's policy of improvement through research and design might not necessarily be indicated in the specifications. We would ask you to check with your appointed Sony dealer if clarification on any point is required.

1-2. MSX-BASIC REFERENCE CHART

COLOR CODE

code	color	code	color
0	Transparent	8	Medium red
1	Black	9	Light red
2	Medium green	10	Dark yellow
3	Light green	11	Light yellow
4	Dark blue	12	Dark green
5	Light blue	13	Magenta
6	Dark red	14	Gray
7	Sky blue	15	White

OPERATORS

Arithmetic operators	^	power
	+	change signs
	* /	multiplication, division
	\	integral division
	MOD	integral residue
Relational operators	+,-	addition, subtraction (Priority increases from bottom to up)
	< > =	comparison
Logical operators	NOT	negation
	AND	logical product
	OR	logical sum
	XOR	exclusive logical sum
	EQV	negation of exclusive logical sum
	IMP	implication

COMMANDS FOR INTERRUPT

format	function	
ON KEY GOSUB line number, line number ...	Interrupt with a function key.	ON KEY GC
KEY (function key number) ON	Enable an interrupt with a function key.	KEY (1) ON
KEY (function key number) OFF	Disable an interrupt with a function key.	KEY (2) OFF
KEY (function key number) STOP	Hold an interrupt with a function key.	KEY (3) STO
ON STRIG GOSUB line number, line number ...	Interrupt with a trigger button of the joystick.	ON STRIG C
STRIG (joystick number) ON	Enable an interrupt with a joystick.	STRIG (1) O
	Joystick number: 0 space bar 1 joystick 1 2 joystick 2	
STRIG (joystick number) OFF	Disable an interrupt with a joystick.	STRIG (2) O
STRIG (joystick number) STOP	Hold an interrupt with a joystick.	STRIG (0) S
ON STOP GOSUB line number	Interrupt with the CTRL and STOP keys.	ON STOP G
STOP ON	Enable an interrupt with the CTRL and STOP keys.	
STOP OFF	Disable an interrupt with the CTRL and STOP keys.	
STOP STOP	Hold an interrupt with the CTRL and STOP keys.	
ON SPRITE GOSUB line number	Interrupt with an overlap of sprite patterns.	ON SPRITE
SPRITE ON	Enable an interrupt with an overlap of sprite patterns.	
SPRITE OFF	Disable an interrupt with an overlap of sprite patterns.	
SPRITE STOP	Hold an interrupt with an overlap of sprite patterns.	
ON INTERVAL= interval GOSUB line number	Interrupt after an interval. Time between interrupts is the interval x 1/50 second.	ON INTERV
INTERVAL ON	Enable intervalled interrupts.	
INTERVAL OFF	Disable intervalled interrupts.	
INTERVAL STOP	Hold intervalled interrupts.	

IONS

FUNCTIONS

- : Give an absolute value.
- : Give arc tangent.
- : Convert to the double precision type.
- : Convert to the integer type. ($-32768 \leq X \leq 32767$)
- : Give cosine of X radians.
- : Convert to the single precision type.
- : Give the number of the line with an error.
- : Give the error code.
- : Give e^x.
- : Give the integer part of X.
- : Give the maximum integer less than or equal to X.
- : Give natural logarithm.
- : Give random number.
- : Give 1 if X > 0, 0 if X = 0 and -1 if X < 0.
- : Give sine of X radians.
- : Give square root.
- : Give tangent of X radians.

CONSTANTS

- : Give N characters from the left of XS.
- : Give N characters beginning with the Mth character from the left of XS.
- : Give N characters from the right of XS.
- : Give N spaces.
- : Give N characters whose character code is J.
- : Give N times the first character of XS.
- : Move the cursor to the Nth position.
- : Give N spaces.

CONVERSION BETWEEN NUMERICAL AND STRING

- : Give the character code of the first character of XS.
- : Give a binary expression of X as a string type data. ($-32768 \leq X \leq 65535$)
- : Give a character whose character code is X.
- : Give a hexadecimal expression of X as a string type data. ($-32768 \leq X \leq 65535$)
- : Give the position of Y\$ after the Nth character of XS.
- : Give a number of characters of XS.
- : Give an octal expression of X as a string type data. ($-32768 \leq X \leq 65535$)
- : Convert to the string type.
- : Convert to the numeric type.

NUMERIC

- : Check if music is playing.
- : When N=1, 2 or 3 it gives -1 when music is playing; otherwise it gives 0.
- : When N=0, the status (-1 or 0) of each music subcommand are ORed and the result is given.

FUNCTION FOR DATA INPUT

- From the screen**
- CSRLIN : Give y-coordinate of the cursor.
- POS (X) : Give x-coordinate of the cursor.
- POINT (X, Y) : Give color code at point (X, Y).
- From data file**
- EOF (file number) : Give -1 when last data in file is read; otherwise give 0.
- INPUTS (N, [X] file number) : Input and give N characters from the file.
- From the printer**
- LPOS (X) : Give the position of the print head in the printer buffer.
- From memory**
- FRE (0) : Give unused area in memory.
- FRE (" ") : Give unused part or string area.
- PEEK (address) : Give the memory contents of the address.
- VARPTR (variable) : Give the starting address of the memory area storing the variable.
- VPEEK (address) : Give the video RAM contents of the address.
- From the keyboard**
- INKEYS : Give the character corresponding to the pressed key.
- INPUTS (X) : Input X characters from the keyboard.
- From I/O port**
- INP (port number) : Input data from the I/O port.
- From machine language subroutine**
- [0]
- USR (to) (0) : Give the value from the user subroutine.
- [9]
- From joystick, paddle or touch pad**
- STICK (N) : Give the direction of the joystick. (N=0 for cursor move key): (Center=0, Up=1, Right up=2, Right=3, Right down=4, Down=5, Left down=6, Left=7, Left up=8)
- STRIG (N) : Give -1 when the joystick trigger button is pressed; otherwise, give 0. (N=0 for the space bar)
- PDL (N) : Input data from the paddle.
- PAD (N) : Give status of the touch pad. When N=0 or 4: Give -1 if the touch pad is touched; otherwise, give 0. When N=1 or 5: Give x-coordinate of the position touched. When N=2 or 6: Give y-coordinate of the position touched. When N=3 or 7: Give -1 if the switch is pressed; otherwise, give 0.

CONSTANTS AND VARIABLES

Constant	String type	Character string of 0 to 255 characters (enclosed in quotation marks)
	Integer type	- 32768 to + 32767
	Floating-point type	Significant digits: 6 (single precision) or 14 (double precision) Exponent part: -84 to +83
	Hexadecimal expression	Takes a prefix "H"
	Octal expression	Takes prefix "O" or "O"
Binary expression	Takes a prefix "B"	

Variable	Variable name	First two characters are effective.
	Type declarator	Written after variable name: % : Integer type ! : Single precision # : Double precision S : String type

SPECIAL VARIABLES

TIME : Retain a value in the timer. Can be rewritten.
 SPRITES (sprite number) : Retain the sprite pattern.
 [Example] SPRITES(1)=CHRS(&H10)+CHRS(&H0C)+CHRS(&H7E)+CHRS(&HFF)+CHRS(&H10)+CHRS(&H10)+CHRS(&H10)+CHRS(&H10)

Special commands and functions for VDP (Video Display Processor)

BASE (expression) : Used to read or write the base address of the VDP table.
 VDP (numeric value) : Used to read or write the contents of the VDP register.

ERROR MESSAGES

SONY

MSX

1	NEXT without FOR	: No FOR statement corresponding to NEXT statement.
2	Syntax error	: Syntax error in the statement.
3	RETURN without GOSUB	: No GOSUB statement corresponding to RETURN statement.
4	Out of DATA	: No more data to be read.
5	Illegal function call	: Illegal specification in function or command.
6	Overflow	: Too big or too small data.
7	Out of memory	: No more memory.
8	Undefined line number	: Undefined line number was specified.
9	Subscript out of range	: Array subscript outside defined range.
10	Redimensioned array	: Array in DIM statement was already specified.
11	Division by zero	: Divided by zero.
12	Illegal direct	: The command can not be used in direct command mode.
13	Type mismatch	: Data type mismatch.
14	Out of string space	: No more string variable area.
15	String too long	: String is too long.
16	String formula too complex	: String is too complex.
17	Can't CONTINUE	: Impossible to continue program execution.
18	Undefined user function	: A function which is not defined by DEF FN statement was used.
19	Device I/O error	: Error in connected equipment.
20	Verify error	: Program in cassette tape and program in memory differ.
21	No RESUME	: No RESUME statement that corresponds to ON ERROR statement.
22	RESUME without error	: No ON ERROR statement that corresponds to RESUME statement.
23	Unprintable error	: An error without an error message has occurred.
24	Missing operand	: Operand is missing.
25	Line buffer overflow	: The entered program exceeds the buffer size.
51	Internal error	: Memory content or text is not normal.
52	Bad file number	: Incorrect file number.
54	File already open	: The file is already open.
55	Input past end	: Last data has been already read.
56	Bad file name	: Incorrect file specification.
57	Direct statement in file	: Command in direct command mode was entered during file loading.
59	File not OPEN	: The file needs to be opened.

COMMANDS AND STATEMENTS

COMMANDS FOR PROGRAMMING

format	function	example
AUTO [starting line number] [, increment]	Generate line numbers automatically.	AUTO 100, 10
DELETE [line number] [-line number]	Delete lines in a program.	DELETE 30-60
LIST [starting line number] [-] [end line number]	Display program list.	LIST
LLIST [starting line number] [-] [end line number]	Print program list on a connected printer.	LLIST 100-200
NEW	Erase program.	
RENUM [new starting line number], [old starting line number], [increment]	Renumber lines.	RENUM 100, 10, 10
REM or '	Insert a comment.	REM--PROGRAM 1--
KEY LIST	Display the function key contents.	

COMMANDS FOR DEFINITION AND SETTING

format	function	example
CLEAR [size of character area] [, highest address]	Initialize all variables and set the size of the character area and the high memory.	CLEAR 400, 55296
DIM variable name (maximum value of subscript [maximum value of subscript] ...)	Declare the name, type, size and dimension of array.	DIM AS (100)
DEF $\begin{matrix} \text{INT} \\ \text{SNG} \\ \text{DBL} \\ \text{STR} \end{matrix}$ character [-character]	Define matching between the first character of a variable name and the type of variable. (INT: integer, SNG: single precision, DBL: double precision, STR: string)	DEFINT I-N
DEF FN function name [(parameter)]=expression	Define user functions.	DEF FNA (X)=A * X^2+B * X+C
ERASE [name of array variable] [, name of array variable] ...	Erase arrays	ERASE A, B, C
KEY function key number, character string	Define strings for function keys.	KEY 1, "LIST"+CHRS (13)

COMMANDS FOR DATA INPUT/OUTPUT

format	function	example
DATA constant [, constant] [, constant] ...	Give data to be read with a READ statement.	DATA 3, 4, 5, 6, ABC, "C, D"
INPUT ["prompt statement"] variable [, variable] [, variable] ...	Give value of variable from the keyboard.	INPUT "AS=";AS
LINE INPUT ["prompt statement"]; string type variable	Give string of up to 254 characters from the keyboard to the string type variable	LINE INPUT "CS=";CS
[LET] variable=expression	Assign data to the variable.	LET A=A+5
MID\$ (X\$, M\$, N)=Y\$	Replace characters beginning with the Mth character of the string X\$ with characters from the beginning to Nth character of Y\$.	MID\$ (AS, 2, 5)=BS
PRINT [expression] [separator] [expression] [separator] ... or ? [expression] [separator] [expression] [separator] ...	Output data onto display screen. A separator is a semi-colon (;), a comma (,) or a space.	PRINT A,B,C

PRINT USING format symbol; expres

READ variable [, variable] [, variable]

RESTORE [line number]

SWAP variable, variable

COMMANDS FOR CONTR

format
RUN [line number]
STOP
CONT
END
TRON
TROFF
FOR variable=initial value TO end value [STEP increment] NEXT [variable] [, variable] ...
GOSUB line number
RETURN [line number]
GOTO line number
IF expression { THEN statement GOTO line number [ELSE statement line number] }
ON expression GOTO line number [line number] ...
ON expression GOSUB line number [line number] ...

Output data onto display screen in the specified format. Format symbols: " " Output the first character. "n" Outputs n+2 characters. "d" Output the entire string. "#" Specify the number of display digits of the numeric data. " + " Add + or - before (after) numeric data. " - " Add - after negative numeric data. " * " Fill space before numeric data with *. " . " Put . in front of numeric data. " * * " Put * in front of numeric data and fill space in front of it with *. " . " Put . after every third digit to the left of the decimal point. " AAAAA " Output with floating decimal points.	10 AS="ABCDEFGG" 20 PRINT USING "":AS 30 PRINT USING "":AS 40 PRINT USING "SS&ATT":AS PRINT USING "###.#":123.45,10.5 PRINT USING "###-":100,-200 PRINT USING "####":100,-200 PRINT USING "##*##":100,200 PRINT USING "##*##":10,20 PRINT USING "###.#.#":123.56 PRINT USING "#####":123.98
Read data in DATA statement.	READ A%
Specify the DATA statement to be read with a READ statement executed next.	RESTORE 100
Exchange values of two variables.	SWAP A,B

G PROGRAM EXECUTION AND FLOW

function	example
Start program execution.	RUN 100
Interrupt program execution.	
Restart program execution.	
Terminate program execution.	
Display line number that was executed.	
Cancel TRON.	
Repeat the program execution between FOR and NEXT.	FOR I=1 TO 10 STEP 2 I NEXT I
Transfer control to the specified subroutine. Return to the main routine with RETURN.	100 GOSUB 100 I 1000 I 1100 RETURN
Transfer control to the specified line.	GOTO 100
Branch control according to the expression value.	IF X=0 THEN 100 ELSE 200
Branch control according to the expression value.	ON A GOTO 100, 200, 300
Branch control according to the expression value.	ON SGN (A)+2 GOSUB 1000, 2000, 3000

COMMANDS FOR DISPLAY SCREEN

format	function	
SCREEN [mode], [sprite size], [key click switch], [baud rate], [printer type]	Specify the screen display mode. Mode 0: 40x24 character text mode 1: 32x24 character text mode 2: high resolution graphic mode 3: multi-color mode Sprite size 0: 8x8 dot unmagnified 1: 8x8 dot magnified 2: 16x16 dot unmagnified 3: 16x16 dot magnified Key click switch 0: Suppress key click sounds. 1: Produce key click sounds. Baud rate 0: 1200 baud 1: 2400 baud Printer type 0: MSX printer 1: Non-MSX printer	SCREEN 2, 0
WIDTH number of display characters per line	Specify the number of characters per line in the text mode.	WIDTH 28
CLS	Erase all displays on the screen.	
LOCATE [x-coordinate], [y-coordinate], [cursor switch]	Move the cursor. Cursor switch 0: Not display the cursor. 1: Display the cursor.	LOCATE 10,
COLOR [foreground color], [background color], [border color]	Specify colors of the foreground, background and the border.	COLOR 8, 11
PUT SPRITE [sprite plane number], [STEP] [x-coordinate, y-coordinate], [color code], [sprite number]	Display the specified sprite pattern at the specified position on the specified sprite plane.	PUT SPRITE
CIRCLE [STEP] [x-coordinate, y-coordinate], radius, [color code], [start angle], [end angle], [aspect ratio]	Draw a circle.	CIRCLE (00
DRAW "graphic subcommands"	Draw an arbitrary graphic.	DRAW "S4"
LINE [STEP] [x-coordinate, y-coordinate], [STEP] [x-coordinate, y-coordinate], [color code], [BF]	Draw a line or a square.	LINE -STEP
PAINT [STEP] [x-coordinate, y-coordinate], [color code], [border line color code]	Color the area inside the border line.	PAINT (120
PSET [STEP] [x-coordinate, y-coordinate], [color code]	Mark a dot.	PSET STEI
PRESET [STEP] [x-coordinate, y-coordinate], [color code]	Mark or erase a dot.	PRESET (1
KEY [ON] [OFF]	Display or erase the contents of function keys.	KEY OFF

file	example
isplay mode. r text mode r text mode graphic mode s	SCREEN 2, 0, 0
nified ied gnified ified

	PSET STEP (10, 10), 14
	PRESET (100, 100)
contents of function	KEY OFF

Graphic subcommands (When B is added, a subcommand changes the starting point only without drawing lines. If N is added, it draws lines but does not move starting point.)

subcommand	function	initial value	subcommand	function	initial value
Mx, y	To an absolute position (x, y)		Fn	Move down to the right.	n=1
M±x, ±y	Move by ±x, ±y from current position.		Gn	Move down to the left.	n=1
Un	Move up.	n=1	Hn	Move up to the left.	n=1
Dn	Move down.	n=1	An	Rotate the coordinate system.	
Rn	Move to the right.	n=1	Cn	Specify a color.	n=15
Ln	Move to the left.	n=1	Sn	Specify the unit number of dots.	n=4
En	Move up to the right.	n=1	X string type variable;	Execute the subcommand assigned to the string type variable.	

COMMANDS FOR MUSIC PERFORMANCE

format	function	example
BEEP	Generate a beep sound.	BEEP: BEEP: BEEP
SOUND PSG register number, expression	Write data into PSG register.	SOUND 7, 7
PLAY "music subcommands" [, "music subcommands"]	Play music.	PLAY "O4L4CEGELIC"

Music subcommands

subcommand	function and range	initial value	subcommand	function and range	initial value
A + - G +-	Musio notes		Tn	Tempo 32 ≤ n ≤ 255	n=120
On	Octave 1 ≤ n ≤ 8	n=4	Vn	Volume 0 ≤ n ≤ 15	n=8
Nn	Pitch 0 ≤ n ≤ 95		Mn	Envelope frequency 1 ≤ n ≤ 65535	n=255
Ln	Length 1 ≤ n ≤ 64	n=4	Sn	Envelope pattern 1 ≤ n ≤ 15	n=1
Rn	Rest 1 ≤ n ≤ 64	n=4		Dot	
X string type variable;	Execute the subcommand assigned to the string type variable.				

COMMANDS FOR PROGRAM AND DATA FILES

format	function	example
MAXFILES=expression	Set the number of files that can be opened in a program.	MAXFILES=3
OPEN "device name [file name]" [FOR mode] AS [#] file number	Open a file and specify a mode. Modes: OUTPUT..... Write INPUT..... Read	OPEN "CRT:TEST" FOR OUTPUT AS #1
PRINT # file number, expression	Write data into file in sequence.	PRINT #1, "ABC"
PRINT # file number, USING format symbol; expression	Write data into file in sequence in the specified format. (See PRINT USING.)	PRINT #1, USING "\ \ \",AS
INPUT # file number, variable [, variable] ...	Read data from file in sequence and assign them to variables.	INPUT #1, A, B, C
LINE INPUT # file number, string type variable	Read string up to 254 characters from file and assign them to variable.	LINE INPUT #1, AS
CLOSE [#] [file number] [, file number] ...	Close files.	CLOSE #1, 2
SAVE "device name [file name]"	Save the program.	SAVE "CAS:PROGRAM"
LOAD "device name [file name]"	Load the program.	LOAD "CAS:PROGRAM"
MERGE "device name [file name]"	Load ASCII codes program and merge it with the program in memory.	MERGE "CAS:PROG2"
BSAVE "device name [file name]", starting address, and address [, execution starting address]	Save the contents of memory within the specified range.	BSAVE "CAS:GAME", &H3000, &H3FFF
BLOAD "device name [file name]" [, R] [, offset]	Load machine language program. Load and execute program when, R is added. The offset is one for the memory address at the time of loading.	BLOAD "CAS:GAME", R
CSAVE "file name" [, baud rate]	Save the program into cassette tape. Baud rate: 1..... 1,200 baud 2..... 2,400 baud	CSAVE "STAR"
CLOAD ["file name"]	Load program from cassette tape.	CLOAD "STAR"
CLOAD? ["file name"]	Compare program saved on cassette tape and program in memory.	CLOAD? "STAR"

Device name
 CAS:..... cassette tape
 CRT:..... text mode screen
 GRP:..... graphic mode screen
 LPT:..... printer
 CAT:..... data cartridge

CHAPTER 2 SERVICE INFORMATION

2-1. DISASSEMBLY

2-1-1. Disassembly of Case

- ① Remove the five screw of the case.
- ② Remove the upper case to the direction shown by the arrow.
- ③ Pull out tape cord of keyboard.

2-1-2. Removal of PU-37 Board

- ① Remove a screw of bottom cabinet.
- ② Remove three screws on shield board.
- ③ Remove nine screws on PU-37 board.
- ④ Disconnect a CN2 of PU-37 board.
- ⑤ Remove a screw of IC1.
- ⑥ Remove PU-37 board in the direction of arrow.

2-1-3. Removal of Keyboard

- ① Remove six keyboard unit fixing screws.
- ② Pull up the keyboard unit in the direction indicated by the arrow.
- ③ Remove 21 keyboard fixing screws.

2-1-4. Replace of PU-37 Board

PU-37 mount equipment MODULATOR, RF unit (MDG-UE3622, AE type). If HB-1B model ordering the PU-37 mount please include the MODULATOR, RF unit (MOG-UB3622).

2-2. SERVICE PAF

1. Safety Related Components Warning.
Components identified by shading marked with Δ on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose part numbers appear in this manual or in service bulletins and service manual supplements published by Sony.
2. Replacement Parts supplied from Sony Parts Center will sometimes have a different shape from the original parts. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts". This manual's exploded views and electrical spare parts list indicate the parts numbers of "the standardized genuine parts at present". Regarding engineering parts changes in our engineering department, refer to Sony service bulletins and service manual supplements.
3. Printed Components in Bold-Face type on the exploded views and electrical spare parts list are normally stocked for replacement purposes. The remaining parts are not normally required for routine service work. Orders for parts not shown in Bold-Face type will be processed, but allow for additional delivery time.
4. Abbreviations

Ref. No.	Description
C□□, CV□□	CAPACITOR
CN□□	CONNECTOR
CP□□	COMBINATION PARTS
D□□	DIODE
DL□□	DELAY LINE
F□□	FUSE
FL□□	FILTER
IC□□	IC
L□□, LV□□	INDUCTOR
M□□	MOTOR
ME□□	METER
PL□□	LAMP
Q□□	TRANSISTOR
R□□, RV□□	RESISTOR
RY□□	RELAY
S□□	SWITCH
T□□	TRANSFORMER
TH□□	THERMISTOR
X□□	CRYSTAL

5. Units for Capacitors, Inductors and Resistors
The following units are assumed in schematic diagrams, electrical parts list and exploded views unless otherwise specified:
Capacitors: μ F
Inductors: μ H
Resistors: ohm

CHAPTER 3 THEORY OF OPERATION

3-1. S-3527 (MSX SYSTEM)

This LSI used with a Z80A (CPU) controls peripheral equipment. The SSG incorporated into the S-3527 enables sound signal generation. Moreover, the S-3527 is provided with 100 terminals configured as shown in the figure below.

External terminal block diagram of S-3527

3-2. TERMINAL FUNCTIONS

- ① **AB0, AB1, AB3 – AB7 (Address bus)**
These bus lines input addresses during memory read/write or input/output operations.
- ② **DB0 to DB7 (Data bus)**
These bus lines read or output data.
- ③ **MREQ, IORQ**
These are signals from the Z80A. The $\overline{\text{MREQ}}$ signal is a memory access input. The $\overline{\text{IORQ}}$ signal is an I/O port access input. The I/O port is an address to control a printer or programmable sound generator (PSG).
- ④ **RFSH**
This signal from the Z80A is a timing pulse input to refresh the dynamic RAM.
- ⑤ **RD, WR**
These are signals from the Z80A. The $\overline{\text{WR}}$ signal is input when Z80A writes data to the memory or I/O device; the RD signal is input when the Z80A reads data from them.
- ⑥ **WAIT**
This signal instructs the CPU to wait until peripheral equipment which cannot follow CPU operation completes its operation. It is output to the Z80A.
- ⑦ **ROMCS**
This is an MSX BASIC ROM (IC12) select signal.
- ⑧ **MPX**
This is a dynamic RAM address select signal.
- ⑨ **RAS**
A dynamic RAM can memorize no data without periodic refreshing. This is a timing pulse to refresh the dynamic RAM.
- ⑩ **CAS2/E, CAS3**
These are dynamic RAM $\overline{\text{CAS}}$ signals.
- ⑪ **WE**
This is a dynamic RAM write signal.
- ⑫ **CS1, CS2, CS3**
These are ROM (Insert the SLOT) read chip select signals. (CS1, 4000-7FFF; CS2, 8000-BFFF; CS12, 4000-BFF)

- ⑬ $\overline{\text{SLT1}}, \overline{\text{SLT2}}, \overline{\text{SLT3/30}}$
These are slot select signals. ($\overline{\text{SLT1}}$, SLOT #1; $\overline{\text{SLT2}}$, SLOT #2; $\overline{\text{SLT3/30}}$ #3 or SLOT #30)
- ⑭ $\overline{\text{SLT01/31}}$
This is an extended slot #01 or #31 select signal.
- ⑮ $\overline{\text{SLT03/33}}$
This is an extended slot #03 or #33 select signal.
- ⑯ $\overline{\text{RSEL}}$
This is an extended slot select register control signal.
- ⑰ $\overline{\text{VDPCR}}$
This is a VDP (IC5) read timing signal output.
- ⑱ $\overline{\text{VDPCW}}$
This is a VDP (IC5) write timing signal output.
- ⑲ $\overline{\text{PDB0}}$ to $\overline{\text{PDB7}}$
These are data output signals to the printer.
- ⑳ $\overline{\text{PSTB}}$
A printer starts printing when it receives this signal.
- ㉑ $\overline{\text{BUSY}}$
This is a signal input from the printer; it is sent during printer operations. Therefore, data transmission is determined by the presence of the $\overline{\text{BUSY}}$ signal.
- ㉒ $\overline{\text{X0}}$ to $\overline{\text{X7}}$
These are keyboard return signals.
- ㉓ $\overline{\text{Y0}}$ to $\overline{\text{Y9}}$ ($\overline{\text{Y10/SK}}$)
These are keyboard scan signal output. ($\overline{\text{Y10/SK}}$ is used as a serial input terminal depending on the function selected during reset operations.)
- ㉔ $\overline{\text{FWD1}}, \overline{\text{FWD2}}$
These are joystick FWD signals or general port inputs.
- ㉕ $\overline{\text{BACK1}}, \overline{\text{BACK2}}$
These are joystick BACK signals or general port inputs.
- ㉖ $\overline{\text{LEFT1}}, \overline{\text{LEFT2}}$
These are joystick LEFT signals or general port inputs.
- ㉗ $\overline{\text{RIGHT1}}, \overline{\text{RIGHT2}}$
These are joystick RIGHT signals or general port inputs.
- ㉘ $\overline{\text{TRGA1}}, \overline{\text{TRGA2}}$
These are joystick TRGA signals or general port outputs.
- ㉙ $\overline{\text{TRGB1}}, \overline{\text{TRGB2}}$
These are joystick TRGB signals or general port outputs.
- ㉚ $\overline{\text{STB1}}, \overline{\text{STB2}}$
These are general port outputs.
- ㉛ $\overline{\text{CMI}}$
This is a cassette tape data input.
- ㉜ $\overline{\text{CMO}}$
This is a cassette tape recording data output.
- ㉝ $\overline{\text{REM}}$
This is a cassette control signal.
- ㉞ $\overline{\text{CAPS}}$
This is a CAPS LAMP signal output to the keyboard (LED driving).
- ㉟ $\overline{\text{KANJI}}$
This is a KANA LAMP signal output to the keyboard (LED driving).
- ㊱ $\overline{\text{JIS/50}}$
This is a keyboard array control input.

- ㊲ $\overline{\text{RSTI}}$
This is an initializing signal input (Schmitt input).
- ㊳ $\overline{\text{RSTO}}$
This initializing signal output initializes the Z80A.
- ㊴ $\overline{\text{PPISND}}$
This is a sound signal output using a software program.
- ㊵ $\overline{\text{SSGSND}}$
This is an analog sound signal output using an SSG.
- ㊶ $\phi \text{ IN}$
This is a Z80A clock input. (Clocks for other CPUs are input through a buffer.)
- ㊷ $\phi \text{ OUT}$
This is a Z80A clock output.

3-3. FUNCTION DESCRIPTION

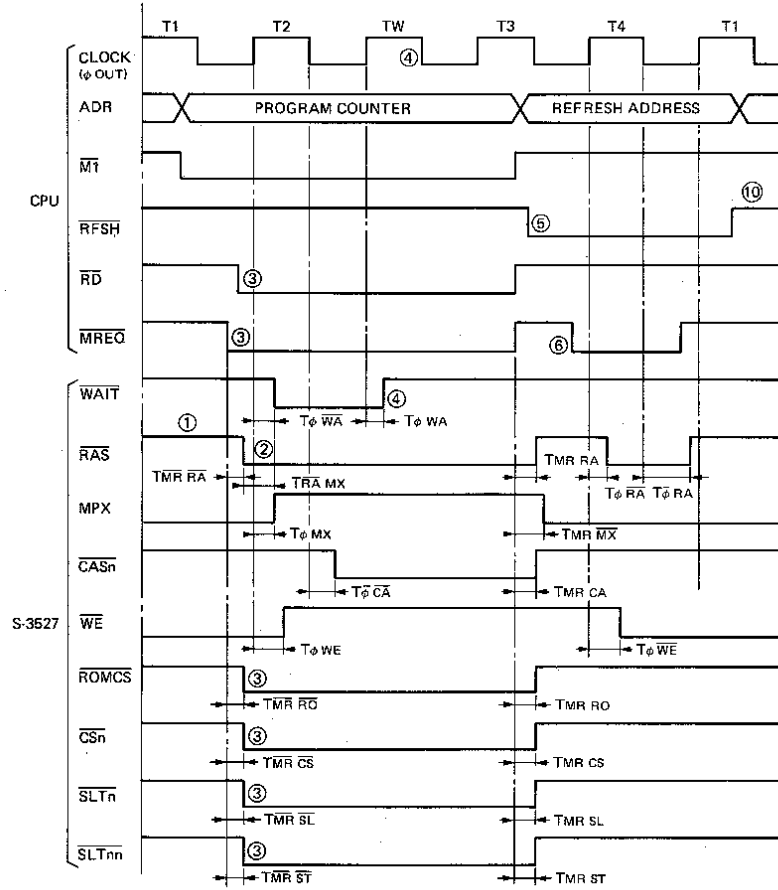

When the Z80A enters the M1 cycle, "L" is output to the Z80A M1 terminal during T1 state and is input to the S-3527 M1 terminal. At this time, both the Z80A and S-3527 enter the M1 mode.

- ① S-3527 enters the M1 cycle.
- ② While the second clock signal appears during T1 state, the $\overline{\text{RAS}}$ terminal is set to "L" and the MPX terminal to "L". At this time, the dynamic memory address bus is selected to access a low address.
- ③ During T1 state, the $\overline{\text{MREQ}}$ and $\overline{\text{RD}}$ signals from Z80A go low and are input to S-3527. The $\overline{\text{MREQ}}$, $\overline{\text{RD}}$, and the S-3527 equipment during slot register $\overline{\text{CAS2}}$, $\overline{\text{CS}}$, and $\overline{\text{ROMCS}}$ signals, make an access to the memory, instruct the CPU operation code, and fetch data to the register.
- ④ When the S-3527 output to the Z80 $\overline{\text{WAIT}}$ pin goes high during T2 state, Z80 enters the T3 state. When the output goes low, Z80 enters the wait state (TW) and waits to enter the T3 state until the output of S-3527 goes high.
- ⑤ Z80A outputs the contents of a refresh register to the address bus during T3 state. As a result, an $\overline{\text{RFSH}}$ signal is input to S-3527 as a low signal.
- ⑥ The $\overline{\text{MREQ}}$ signal from the Z80A returns from low to high during T4 state. A dynamic memory can be refreshed using the $\overline{\text{MREQ}}$, $\overline{\text{RFSH}}$, and address bus.

As shown in the figure below, the operation code fetch cycle is located between T1 and T4 states. Point ⑩ indicates the T1 state in the next cycle.

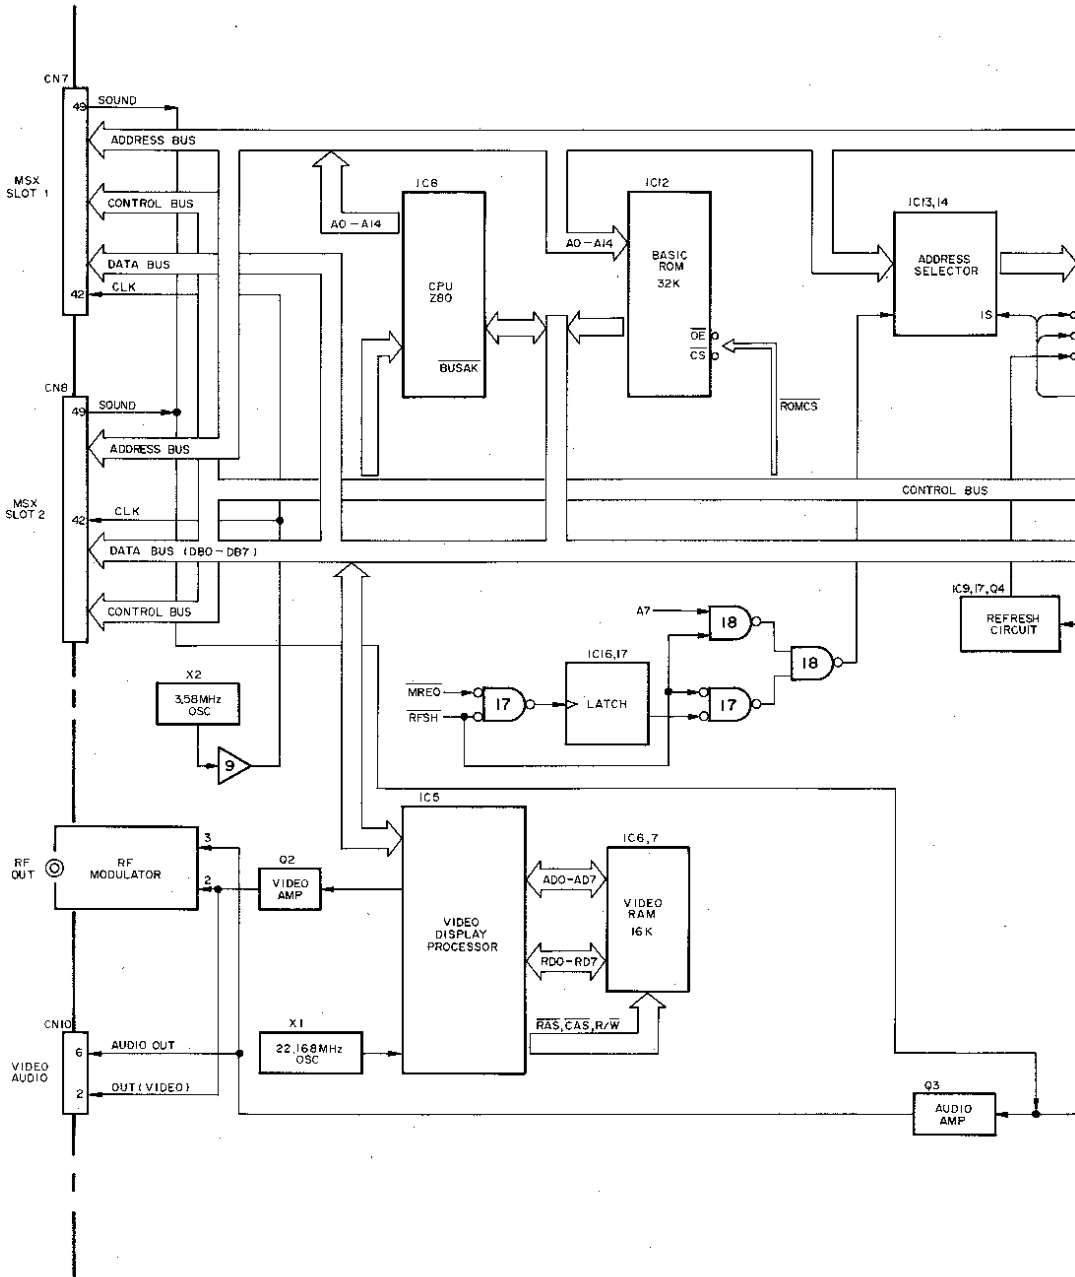

When a refresh address is output on the address during T4 state, the $\overline{\text{RFSH}}$ signal goes low. When the refresh address disappears on the address, the $\overline{\text{RFSH}}$ signal goes high.

M1 Cycle timing

CHAPTER 6 ALIGNMENT

6-1. CLOCK FREQUENCY ADJUSTMENT

1. Power switch to ON.
2. Connect the frequency counter to pin 38 of IC5.
3. Adjust CV1 so that frequency counter to 22.168 MHz \pm 10 Hz.
